

MIGRATORY SHOREBIRD SEMINAR

Friday 11th August

10:00am – 12:00 noon

333 Bennetts Road, Norman Park, QLD, 4170

All welcome
It's free!

PROGRAM

Everything you ever wanted to know about migratory shorebirds but were too afraid to ask.

Discover fascinating facts on why shorebirds migrate, their masterful navigation skills, feeding ecology and habitat selection. What are the latest policy and planning frameworks and how are they driving international co-operation for shorebird conservation?

Louise Duff, Program Manager – Wetlands Catchments Coasts, Conservation Volunteers Australia

Why are Moreton Bay's shorebirds declining so quickly, and what can we do about it?

Moreton Bay teems with tens of thousands of migratory shorebirds each summer, one of the key reasons for the Bay's listing as a Ramsar site back in October 1993. Get the latest data on their crashing decline, what's happening where, and why effective management of Moreton Bay and sites along the flyway will be crucial for their continued survival.

Richard Fuller, Centre for Biodiversity and Conservation Science, University of Queensland

Light lunch and catch-up with colleagues
